## Project Abstract

A virtual tour of Discovery Park campus. Using 360° photographs and stitching them to make user feel as if they are there. Students can see discovery park campus and what the rooms and labs look like all from their computer screen.

For future improvements, we can update to a better map, and add more areas of Discovery Park, make it feel as if the users are there and some easter eggs.

Biggest challenge we faced was the pandemic that hit us, and we had to adjust how to work together, communicate with our clients and try and finish our project on time while working remotely. We developed skills in HTML, CSS, learned about the three.js library and some Windows Server. Gained some more experience about communicating with clients.

All the rooms of Discovery Park are not complete, we would like to add more rooms and hallways
