 Sponsor: Shradha Piparia

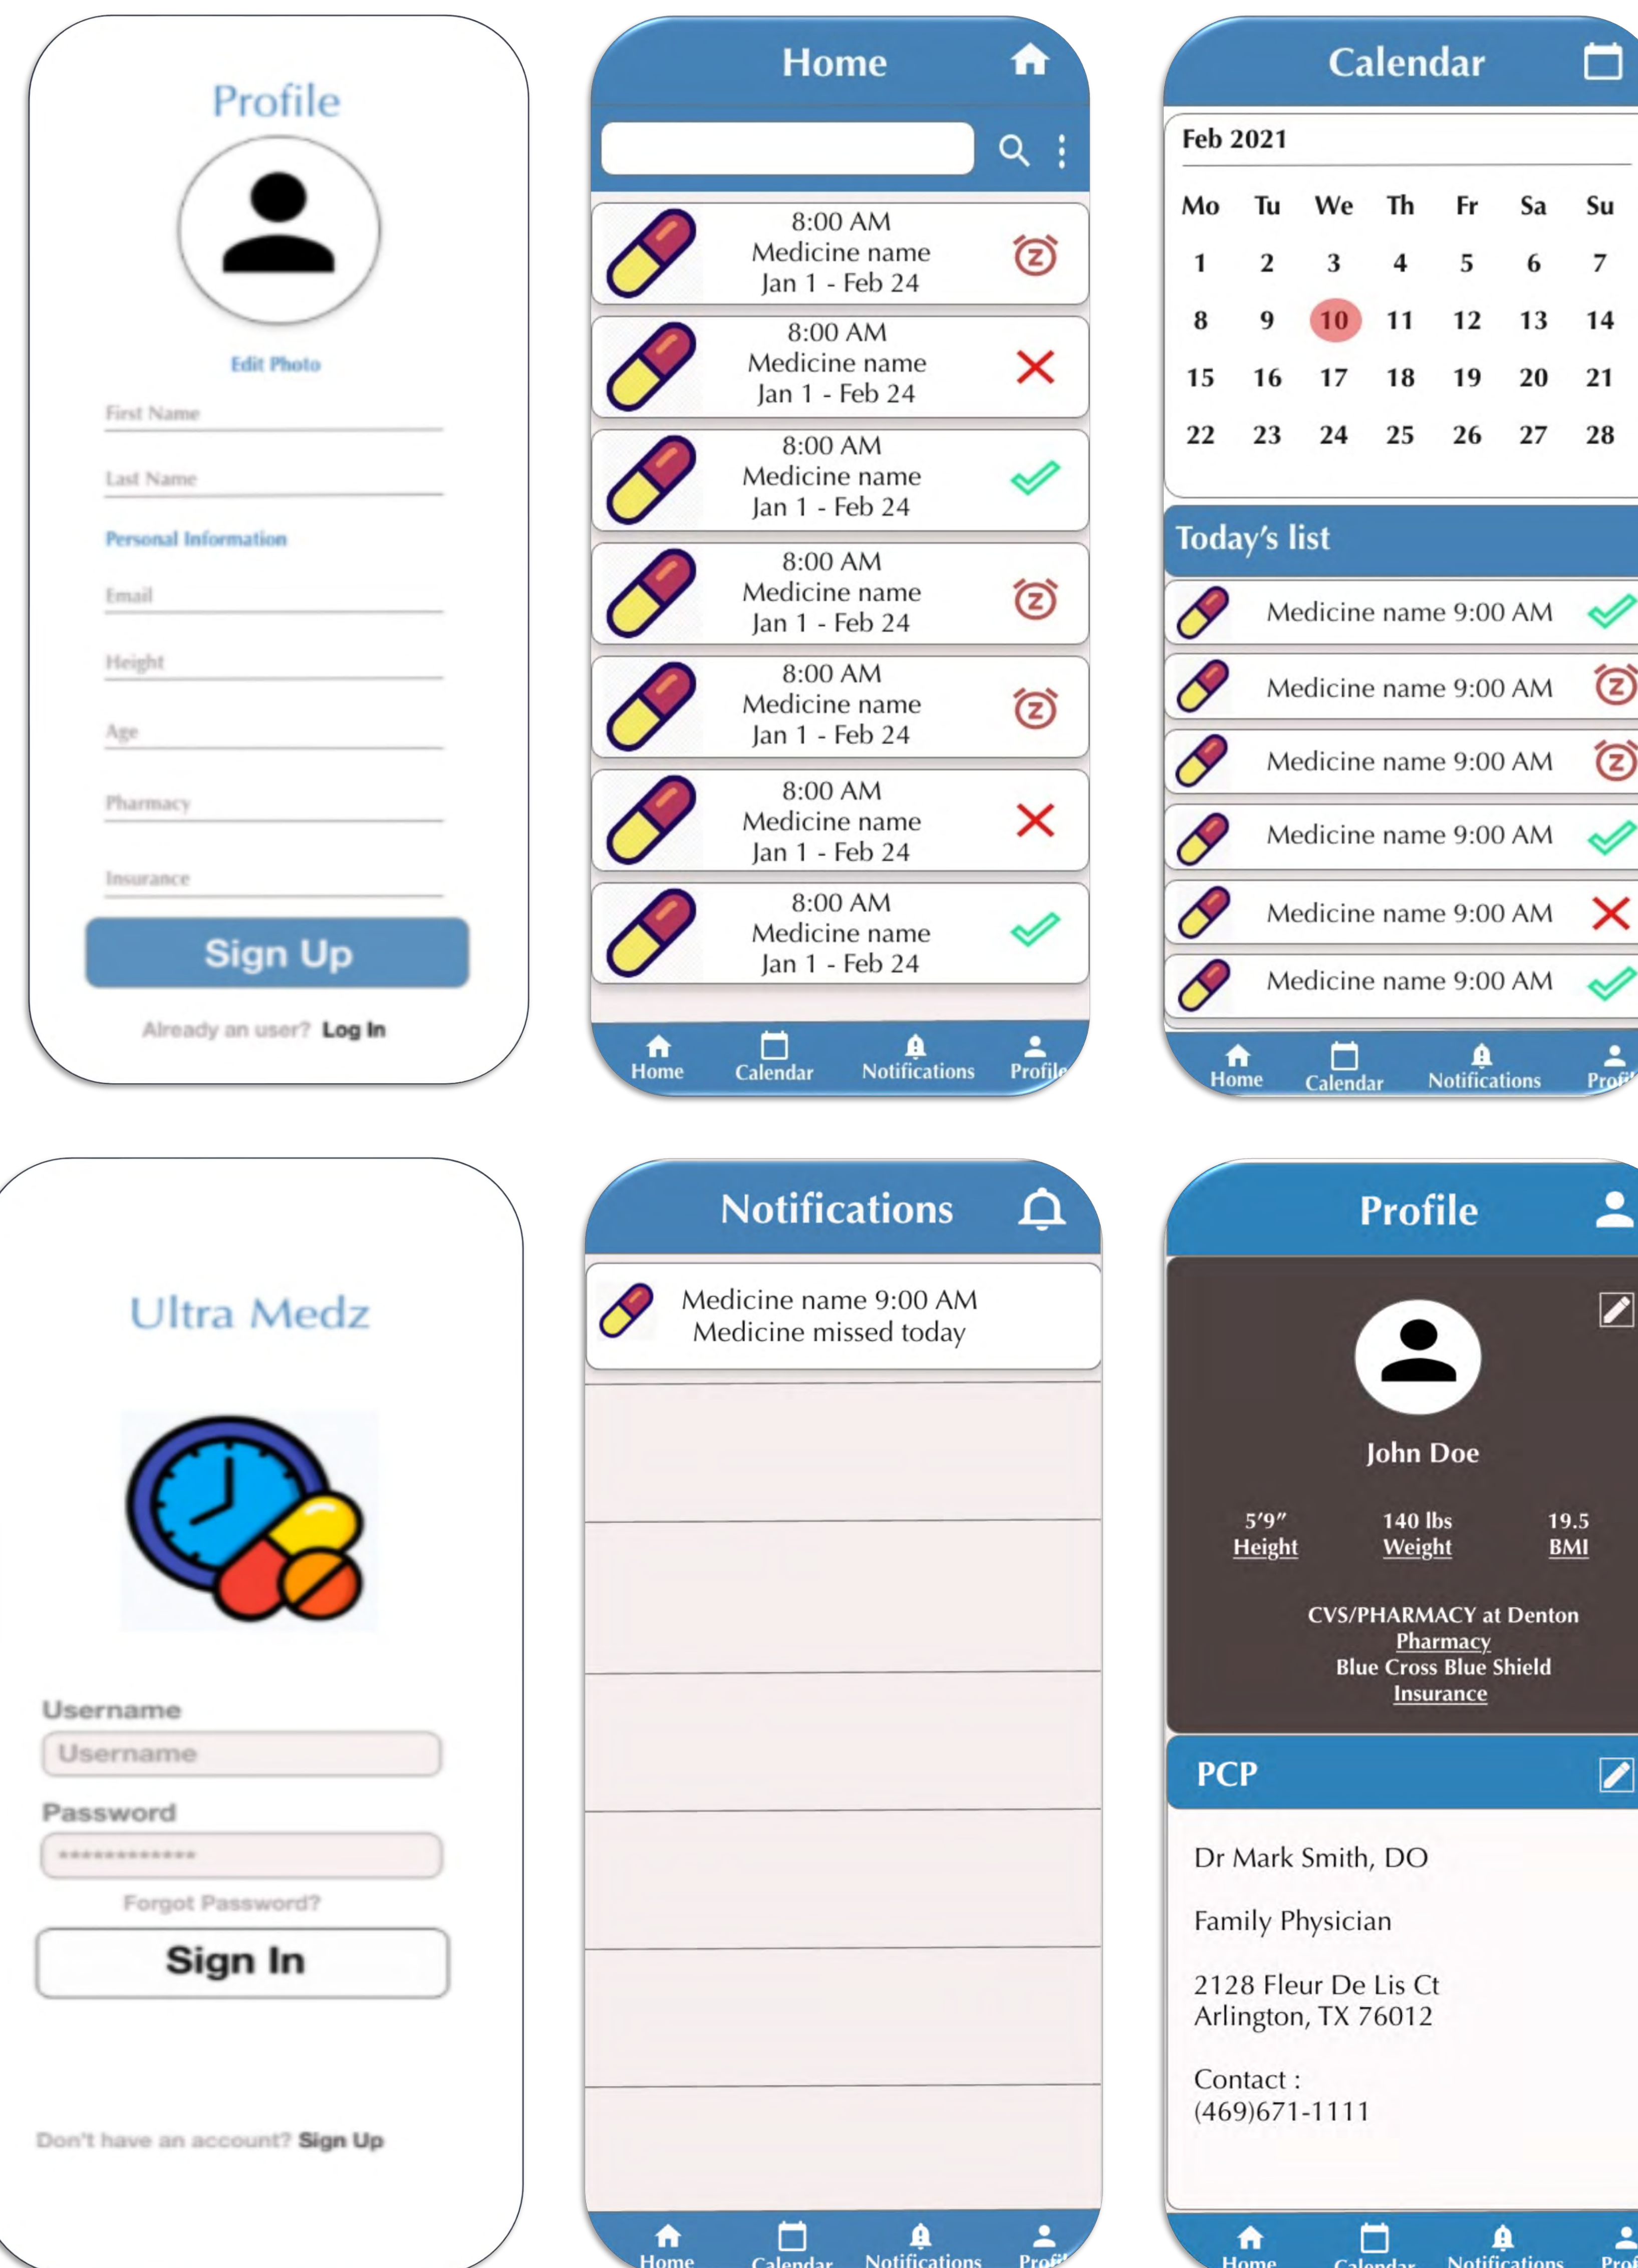

### Project Overview

Staying healthy and knowing when to take your medications when you need them is vital. For many people out there, keeping track of what medication to take, when to take it, and doing so on a regular schedule can become difficult and dangerous. This is where Ultra Medz comes in. Users can add their medications and set reminders on when to take them. It also gives reminders for when refills are due, so users are always fully stocked up.

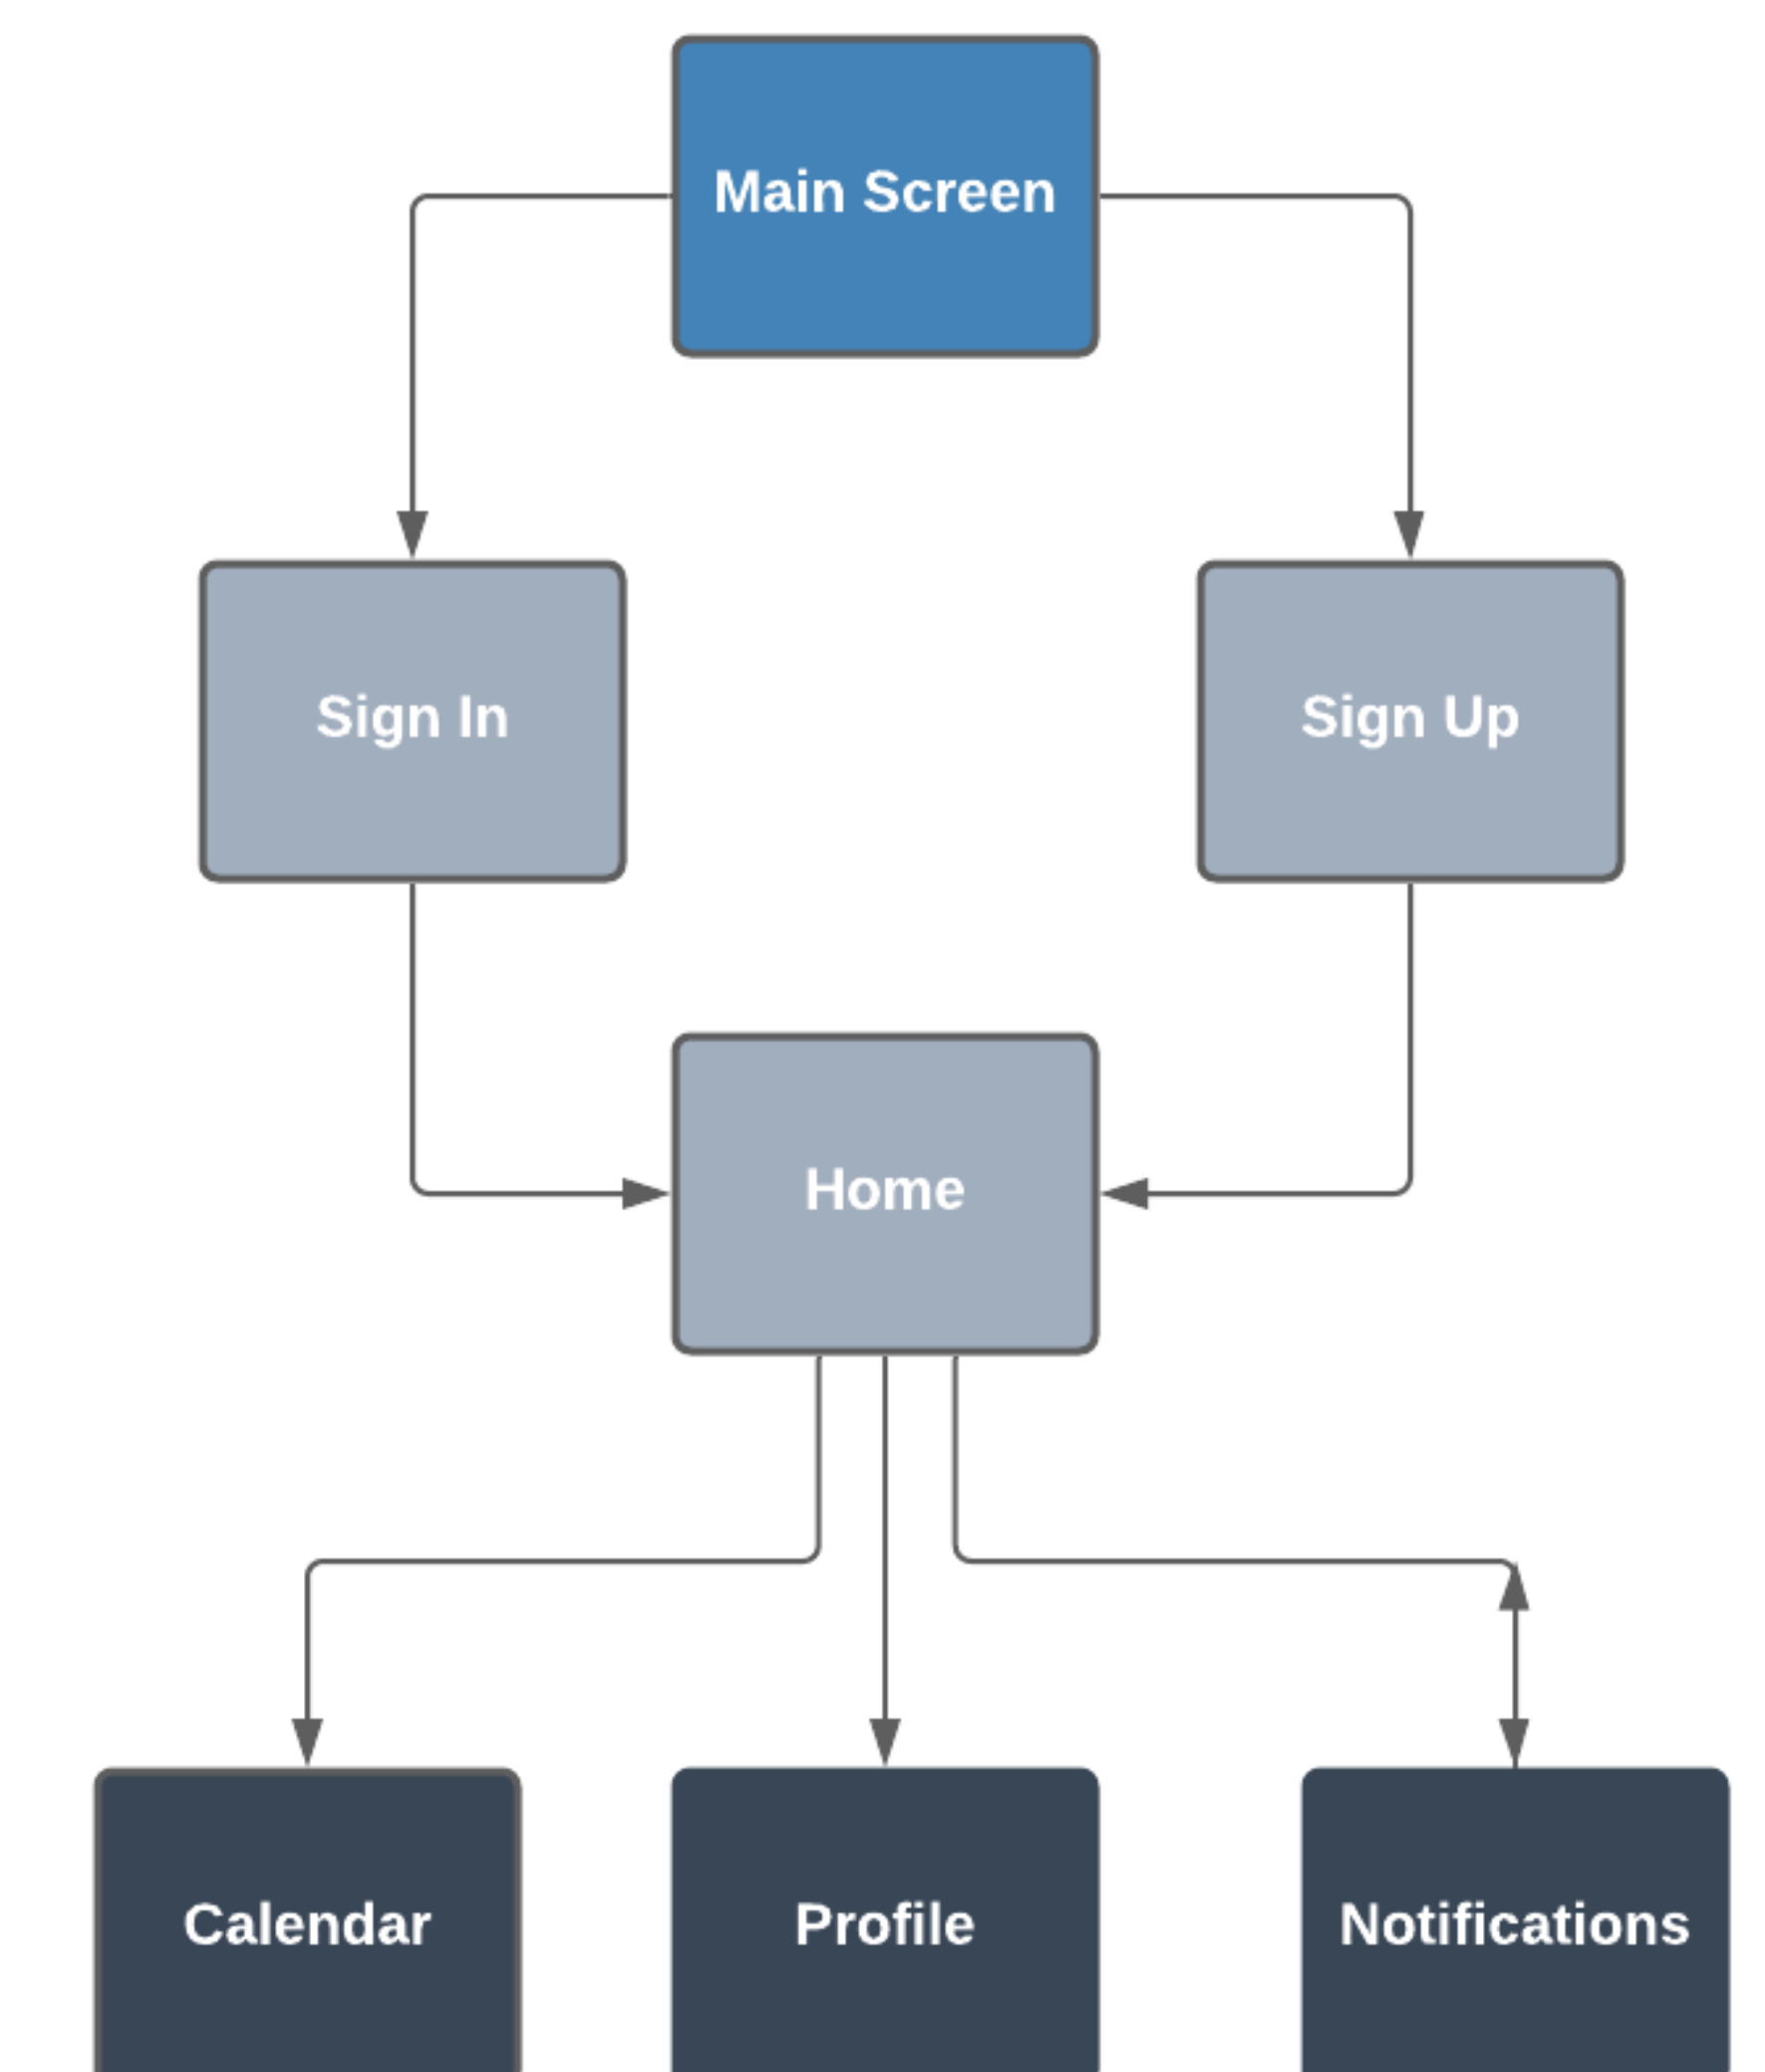

### Features

- Health Information (height, weight, medical history)
- Frequently used medicines pre-built in app database
- Add user's information into the database
- Notification system
- Log medicine intake schedule
- Refill reminders
- Medicine schedule reminders
- Reward system
- Buddy system
